EVIDENCE AND RESEARCH GAPS

Do not confuse occupational demographics with offending, or recommendations with measured effects.

SHIFT	Waste cleanups, food duty switches, PPE and hand hygiene
WEEK	Exposure logs, work orders, response time, complaints
MONTH	Disgust, job satisfaction, support, fatigue and job control
6 MONTHS	Sick leave, turnover, inspection violations, customer service
12-24 MONTHS	Matched-site study: in-house / shared-duty / mobile hygiene

CRIME: FBI NIBRS captures offender demographics and incident circumstances, but not workplace fecal-exposure history.

Consequently NO reliable exposure-specific crime rate or causal inference is available from NIBRS.
